**SEPC seeks SLiM Device to Mitigate Transmission Line Sag**

Sichuan Electric Power of China (SEPC) is purchasing a custom Sagging Line Mitigator (SLiM) device for evaluation and use on an actual transmission line. Electric Power Research Institute (EPRI), who is facilitating the transaction, has contracted Power Transmission Solutions, Inc. (PTS) to design, build, test and deliver the device to SEPC based on requirements specified by SEPC.

SEPC seeks to:

- Evaluate the SLiM technology for its transmission line sag mitigation capabilities;
- Install the SLiM device on a SEPC transmission line; and
- Monitor the SLiM device performance and reliability under actual field conditions.

The project has begun and is progressing on schedule for shipment in late June 2007.
