PTS Announces First International Sale of SLiM to Eskom/Trans-Africa Projects (Eskom/TAP)

PTS made its first international sale of a SLiM device recently. Eskom/TAP purchased a custom-made SLiM to deploy in its transmission system. This custom SLiM is in addition to the SLiM that Eskom/TAP is testing in its 132kV system. PTS believes that its standard SLiM (the one used in the TAP field trial) will further prove the viability of SLiM in the 115-230kV class systems and that the custom SLiM, which is a lighter-duty version of the standard, will prove the application of SLiM in lower transmission voltages. In addition to domestic marketing of SLiM, PTS is actively exploring additional sales to Eskom/TAP as well as to other utilities around the world.
