PTS Establishes Another SLiM Field Trial with ESKOM/Trans-Africa Projects (ESKOM/TAP)

ESKOM has just released their draft interim report of its SLiM devices.

ESKOM has purchased one custom-size SLiM device and is using a standard-size SLiM device on loan from PTS. The goal of the initial testing by ESKOM has been to gain confidence in the performance and the reliability of the SLiM device.

The results of the interim report indicate that the device is performing well and a full report is scheduled for November 2007. ESKOM plans to conduct additional testing which includes installation and monitoring of the device on an actual transmission line.
